- Responsive Web Design
Certification
- JavaScript Algorithms & Data
Structures Certification (in
process)

ABOUT ME

I am a full-stack developer looking to innovate and create functional, responsive, cutting-edge web apps that get noticed and that user love.

Although I have only recently transitioned from a career in private educational administration and teaching, technology and web development have always been a mainstay focus. Throughout the last decade, for instance, I have been the Director of Technology for a school, authored and maintained 3 full-scale school websites, and managed technology on the back end (Azure, Office365, firewalls, etc.). Additionally, I have spent the last 5 year honing my skills in web technologies through projects, challenges, real-life application, bootcamps, and specialized training.

EXPERIENCE

Director of Technology/Head Administrator

Cornerstone Christian Academy / McKinney, TX / 2008-2023

As Head Administrator I was successful in recruiting and developing a team of collaborative, competent professionals to design, administrate, and maintain a thriving educational model and growing student body. I also functioned as the Head of Information Technology for the school. Duties include:

- Building the original website using HTML and CSS utilizing Adobe products.
- Creation and maintenance of current school site using WordPress.
- Global administration of Office365, including all admin centers.
- General IT work: troubleshooting of programs, operating systems (Windows/iOS), and physical computers for admin, teachers, and students.

Founder/Director

PlenaVida Educational Tours / San José, Costa Rica /2019-2023

As Founder/Director of this Costa Rican non-profit Foundation, my responsibilities include creating an international team of professionals to orchestrate accredited educational foreign tours for students and encourage various modes of tourism for non-students.

- Build and maintain website: www.plenavidatours.com.
- Assure governmental compliance.
- Coordinate communications and technology for travelers, personnel, and my hospitality team.

Founder/Web Developer

@Media / Shawnee, Oklahoma

As the Web Developer, my job is to interview potential clients with respect to the needs and aesthetic preferences regarding their website, consult with the graphic arts department and the business data department and collaborate on a design that will support business growth.

- Consult with potential clients to determine business needs.
- Collaborate interdepartmentally to present overall designs to support client needs.
- Develop websites according to specifications.
